

What skills and knowledge will you be utilising?

Programming language: Python

Data Analytics: SQL/ NoSQL - Tableau - Matplotlib - NumPy + Pandas

Machine Learning: Supervised and Unsupervised ML: Simple + Multiple Linear Regression - Logistic Regression - Decision Trees - Clustering - PCA

- identifying patterns, predictive modelling, problem-solving and visual storytelling
- write code that can design and interact with databases to extract data that can solve real-world problems.
- understanding and applying key machine learning and artificial intelligence concepts to practical uses.
- communicate insights about your data to technical and nontechnical stakeholders through visualisation

Explain (in approximately 200 - 400 words) the nature of the self-employment or entrepreneurial opportunity you have thought of, and the objectives that you would like to achieve

I am taking the Data Science Bootcamp where I will learn to utilise Python for data analysis, data visualisation, and machine learning. My plan is to preferably be employed in a junior or apprentice role where I will receive excellent guidance as well as opportunities to implement what I have learned from this bootcamp and learn about other technologies as well. For example, the Data Science Degree Apprenticeship with the Bank of England which awards a level 6 certificate as well as a BSc in Data Science. After completing the apprenticeship or moving up from the junior role, I may continue employment with the same company or possibly be open to contractual opportunities for python developer or other data science roles such as the ones on Indeed where rates vary from £400-£1000 per day.

Preferably, I want to be in entry level or junior position as my first choice of employment and do the apprenticeship as a back up plan. This is because I want to have higher mobility in terms of pay rises which tends to be fixed for apprenticeships. On a side note, I also plan to use what I learn to create applications for personal use, whether it be for creativity purposes or analytics.

Thank you for your submission of BYB 1.

- If you forgot to take screenshots of the form with your data in it, please type your data out to submit it.

Build Your Brand I: Thinking about a job search

If you're self-employed:

Input the contact details of companies and the business contacts of places you would pitch your services or products to. Also, please fill in the section right at the end of the form.

If you are ready to apply for jobs:

You won't actually be applying in this task, but we would like you to think about the sort of roles you might like to apply for and the sort of companies you might want to work for. Find 2 junior tech roles currently being advertised, ensuring you consider large and small companies as well as tech startups. For each of these, identify the recruiting/hiring managers (possibly the Talent or HR people at each company). Capture the details of each of the 2 roles and contacts in this form. If any of your URLs are greater than 255 characters, shorten them by using bitly.com and paste the shortened version into the form.

If you're not ready to apply for jobs yet or may even be currently employed and not looking for a new role right now:

We still require you to identify relevant contacts and get into practice should you eventually look for a new role. However, we will NOT reach out to these employers on your behalf. Please also fill in the contact at your current company who would be involved in a change to tech.

Currently employed students not looking for change

If you're currently employed and not looking for a new role yet, we encourage you to also list a contact at your company who would be responsible for or involved in a decision for an internal role check/change into tech.
